A METHOD FOR INCREASING THE SWEETNESS OF  
BEET SUGAR. [1963] [8]p. 5 refs.

Order from SLA \$1.10

63-16359

Trans. of Eijo to Shokuryo (Japan) 1955/56, v. 8,  
p. 170-173.

DESCRIPTORS: \*Beets, \*Taste, Sucrose, Food,  
Carbohydrates, Chemical analysis, Processing.

The sweetnesses of cane sugar and beet sugar differ  
because of the properties and composition of the minute  
quantities of ash present. Cane sugar contains more  
calcium salts in its ash, whereas beet sugar contains  
more potassium salts. Due to the relatively high con-  
centrations of potassium salts in beet sugar its sweet-  
ness is decreased compared to cane sugar. The addi-  
tion of suitable amounts of calcium salts to beet sugar  
increases its sweetness until it is comparable to cane  
(Food, IT, v. 10, no. 5) (over)
